

Endoline Type 734 fully automatic case taper

Objectives:

- To increase the speed of case sealing

Scenario

United Biscuits is a leading European manufacturer of biscuits and snacks. Endoline have been supplying the company's end of line packaging machines for over 20 years and until last year United Biscuits had successfully used Endline 704 machines for their case sealing. However following an increase in output UB required a faster case sealing machine to keep pace with demand.

Solution

Until last year United Biscuits had successfully used Endline 704 machines for their case sealing - designed over 20 years ago, the 704 is testament to the longevity of Endline machines. Since its launch two years ago, however, the hugely successful Endline 734 fully automatic case tapering machine has set new standards in high speed case sealing. It incorporates the latest technology to automatically close and seal a fully random size feed of cases at up to 20 cases per minute - twice the speed of the 704.

Objectives Achieved:

Increased speed of case sealing

Speeds of up to 20 cases per minute achieved
